OPEN AGENT HACKATHON 2026 · DRAFT PROOF

Find funding you can defend.

Grantline turns public grant notices or a nonprofit's list into a **source-linked review** and an exportable decision trace.

A grant match needs reasons.

Input

Search posted Grants.gov notices, or import a CSV or JSON list with source links.

Decision

Check date, region, focus, amount, source, and duplicate identity. Rank the survivors.

Output

Candidate, source-review, and exclusion cards show each rule and the linked source.

Trace

Export every decision as JSONL for review and correction.

WORKING LOCAL DEMONSTRATION

Real notices. Honest review.

A live Grants.gov search loaded six posted notices. All six need original-source eligibility review. No uncertain notice became a candidate.

Eight local tests pass. The five-record fictional sample still yields two candidates and three exclusions for repeatable checks.

SUBMISSION STATUS · OCTOBER 22, 2026

Open sponsor checks remain.

Zetaris

A private read-only grant-view import is wired. No live instance call is verified.

Meterless

The local World Model reference records each review as sourced facts and relations.

Cursor

Local sign-in stops at a human check. Authenticated use is not verified.

Entry

Entrant ties, public video, and platform receipt remain unverified.
